

# FINAL EXAM-MATH 1300-2004

APRIL, 2004

Name(Print LEGIBLY)\_\_\_\_\_

I.D. Number\_\_\_\_\_

**Instructions-**This final examination consists of 15 multiple choice questions worth 4 points each. Your answers to the multiple choice questions must be clearly marked in the squares below. There are also 3 long answer questions worth a total of 40 points. For the long answer questions, you must show your work **on the exam itself** and clearly display your answers. **Do not unstaple these pages.**

**NO CALCULATORS. NO NOTES OR BOOKS.**

Each student will receive one booklet for scratch work only. **Scratch work will not be graded.** Do not unstaple the booklet or remove pages. Your name, student number and seat number must appear on the booklet, and you must turn the booklet in at the end of the exam.

## Multiple Choice Answers:

#1

#2

#3

#4

#5

#6

#7

#8

#9

#10

#11

#12

#13

#14

#15

**Question 1-** Calculate

$$\lim_{x \rightarrow 2} \frac{x^2 - 5x + 6}{x^2 - 4}.$$

- A)  $\frac{1}{7}$     B)  $-\frac{3}{8}$     C)  $-\frac{1}{4}$     D)  $-\frac{4}{9}$     E) The limit does not exist.

**Question 2-** Consider the following function:

$$f(x) = 3x^2 + \frac{2}{x}$$

Calculate  $f'(2)$ .

- A)  $-\frac{1}{2}$     B)  $\frac{1}{2}$     C)  $\frac{4}{3}$     D)  $\frac{23}{2}$     E)  $\frac{13}{2}$

**Question 3-** Find the equation of the tangent line to the graph of  $y = x^3 - 2x^2 + 5x - 7$  when  $x = 2$ .

A)  $y = 7x - 11$     B)  $y = 9x - 15$     C)  $y = 7x - 9$     D)  $y = 7x - 7$

E)  $y = 9x - 8$

**Question 4-** Suppose a demand function for a product is given by  $p(x) = \sqrt{400 - 3x}$ . What is the elasticity of demand when  $x = 100$ ? Is demand elastic at this point?

A)  $-\frac{3}{50}$ , inelastic    B)  $-\frac{2}{3}$ , elastic    C)  $-\frac{2}{3}$ , inelastic    D)  $-\frac{3}{50}$ , elastic    E)  $-\frac{5}{8}$ , elastic

**Question 5-** Suppose  $y^2 + ye^x + e^{2x} = 3$ . Find  $\frac{dy}{dx}$  at the point  $(0, 1)$ .

- A) -2   B) -1   C) 0   D) 1   E) -3

**Question 6-** Which of the following statements is correct for the function  $f(x) = xe^{2x}$

- A)  $x = \frac{-1}{2}$  is a local max.   B)  $x = \frac{-1}{2}$  is a local min.   C)  $x = 2$  is a local max.  
D)  $x = 2$  is a local min.   E)  $x = 1$  is a local min.

**Question 7-** On what interval is the function  $g(x) = (x^2 - 4)^7$  increasing?

- A)  $(-2, \infty)$    B)  $(-1, 1)$    C)  $(-\infty, 0)$    D)  $(0, \infty)$    E)  $(-2, 2)$

**Question 8-** If  $f(x)$  is a function such that  $f'(x) = 6x^2 - 4x + 1$  and  $f(0) = 2$ , find  $f(2)$ .

- A) 12   B) 14   C) 16   D) 18   E) 20

**Question 9-** Calculate:

$$\int_1^{e^2} \frac{(\ln(t))^2}{t} dt$$

- A)  $\frac{e^6}{3}$    B)  $\frac{8}{3}$    C)  $\frac{2}{3}$    D)  $\frac{e^8}{3}$    E)  $\frac{1}{3}$

**Question 10-**

$$\int_0^4 \sqrt{2x+1} dx =$$

- A)  $\frac{38}{3}$    B)  $\frac{32}{3}$    C)  $\frac{44}{3}$    D)  $\frac{20}{3}$    E)  $\frac{26}{3}$

**Question 11**-Calculate:

$$\int_2^{\infty} \frac{dx}{x^5}$$

- A)  $\frac{1}{64}$    B)  $\frac{3}{4}$    C)  $\frac{1}{2}$    D) The integral diverges.   E)  $\frac{5}{4}$

**Question 12**- Suppose that for a certain product, the demand function is given by  $D(x) = \frac{25}{x+2}$  and the supply function is given by  $S(x) = x + 2$ . Calculate the producer surplus.

- A) 3   B)  $\frac{13}{3}$    C)  $\frac{9}{2}$    D) 1   E)  $\frac{27}{2}$

**Question 13-** If  $f(x, y) = x^2 + xy - 3y^2 + 4$ , calculate  $f_x(2, 1)$ .  
A) 3    B) 4    C) 5    D) 6    E) 7

**Question 14-** Find  $f_{xy}(0, 0)$  for  $f(x, y) = xye^{xy}$ .  
A) 0    B) 1    C) 2    D) 3    E) 4

**Question 15-** Consider the function  $f(x, y) = 8 + 4x + 2y - x^2 - y^2$ . Which of the following statements is correct?

- A)  $f(x, y)$  has a local minimum at  $(2, 1)$ .
- B)  $f(x, y)$  has a local maximum at  $(2, 1)$ .
- C)  $f(x, y)$  has a saddle point at  $(2, 1)$ .
- D)  $f(x, y)$  has a saddle point at  $(-1, -1)$ .
- E)  $f(x, y)$  has a saddle point at  $(1, -1)$ .

**Long Answer Question 1 (13 points)**

The manager of an apple orchard wants to harvest her apples at a time that will maximize revenue. Currently apples are selling for 86 cents per pound. The price will decrease by 2 cents per pound for each week she waits. Each tree in the orchard now has 35 pounds of apples, but for each week she waits, each tree will gain an additional pound of apples. How many weeks should she wait before harvesting? Be sure to explain why your answer is an absolute maximum.

**Question 2** (15 points)

Consider the two functions:

$$f(x) = x + 2 \text{ and } g(x) = 4 - x^2$$

(a)(3 points) Find the intersection points of the graphs of the two functions.

(b)(6 points) On the next page, graph these functions, and shade the region bounded by  $f(x)$ ,  $g(x)$ ,  $x = 0$  and  $x = 3$ .

(c)(6 points) Find the area of the shaded region.

**Question 3** (12 points)

Consider the function of two variables  $f(x, y) = x^3 - 6xy + 3y^2 - 9x + 7$ . Find all critical points and identify their type.
